

Analysts say that 30 to 50% of Automation and RPA projects fail. Here is how you can prevent this and run successful projects.

# 01 problem

Identify the correct pain points and solve problems to generate value

# 02 strategy

Build a roadmap for your automation initiatives. Imbed projects into a wider AI and Automation strategy.

# 03 skills

Build automation teams. Invests in change management and training for the entire workforce.

# 04 data

Secure access to a solid and high volume pipeline of usable, understandable and maintainable data.

# 05 test

Start with small PoCs, measure the results and improve. Automate the highest value or easiest parts first.

# 06 integration

Establish a broad view of RPA and how it links to AI and take an end-to-end process view to optimize.

# 07 scale

Plan to expand smart, combine technologies and scale up and industrialize .

Focusing on 7 key areas help to launch a successful automation journey

# Thank you
